Transboundary Aquifer Information Sheet

4N - Poplar

**Geography**
- Total area TBA (km²): 23 000
- No. countries sharing: 2
- Countries sharing: Canada, United States of America
- Population: 16 000
- Climate zone: Semi-arid
- Rainfall (mm/yr): 310

**Hydrogeology**
- Aquifer type: Data not available
- Degree of confinement: Data not available
- Main Lithology: Data not available

Map and cross-section are only provided for illustrative purposes. Dimensions are only approximate.
4N - Poplar

TWAP Groundwater Indicators from Global Inventory
No data available.

Key parameters table from Global Inventory
No data available.

Aquifer description
No data available.

Contributors to Global Inventory
No contributions.

Considerations and recommendations
Canada and the United States of America did not provide data to the global inventory. This unfortunately presents a major gap in the first global transboundary groundwater assessment.

Request:
If you have data or information about this transboundary aquifer that can improve the quality of this information sheet and the underlying database, please contact us via email at info@un-igrac.org. If appropriate, the information will be uploaded to the database of transboundary aquifers and will also be used in new versions of this information sheet.

Colophon
This Transboundary Aquifers information sheet has been produced as part of the Groundwater Component of the GEF Transboundary Water Assessment Programme (GEF TWAP). GEF TWAP is the first truly global comparative assessment of transboundary groundwater, lakes, rivers, large marine ecosystems and the open ocean. More information on TWAP can be found on: www.geftwap.org. The Groundwater component of TWAP carried out a global comparison of 199 transboundary aquifers and the groundwater systems of 41 Small Island Developing States. The data used to compile this transboundary aquifer information sheet has been made available by national and regional experts from countries involved in the TWAP Groundwater project. For aquifers larger than 20,000 km² and which are not overlapping, additional data are available from modelling done by the Goethe University Frankfurt (Germany) as part of TWAP Groundwater. All data were compiled by UNESCO-IHP and the International Groundwater Resources Assessment Centre (IGRAC – UNESCO Category II Institute). Values given in the fact-sheet represent an approximate guide only and should not replace data obtained from recent local assessments. The editors of this information sheet are not responsible for the quality of the data.

For more information on TWAP Groundwater and for more data, please have a look at the TWAP Groundwater Information Management System which is accessible via www.twap.isarm.org or www.un-igrac.org.

References:
- Climate: Climate indicates the major climate zone which occurs in the aquifer area. If more than 1 climate zone is present the zone with the largest surface area was selected. Source climate data: ArcGIS Online (2015), Simplified World Climate zones. Owner: Mapping Our World GIS Education. Original map: National Geographic World Atlas for Young Explorers (1998).
- All other data: TWAP Groundwater (2015).
